Elefas is a haven in time and space where imagination can weave together places, stories, characters, poems, languages, music, rec...
 The balance of this world is based on relationships between numbers, colours, letters, and their attributes, according to the diagram.
 Elefas itself corresponds to number 0.

Planet Elefas revolves around two suns, respectively the greater and the lesser sun. The greater sun appears shaking in the sky, because formed of three stars, tightly and chaotically orbiting together. This influenced several mythologies. The tilted rotation axis gives one equatorial zone, two tropical zones with deserts, and two temperate zones with... seven seasons.

The orbit around the greater sun gives four familiar seasons, but summer is very hot with continuous daylight. The 12 hours of lesser sun however less warm and bright than the 12 hours of greater day.

Then starts the cycle around the lesser sun, colder than that the greater. During "Cold Summer", the two suns are superimposed in the summer position, but their distances result in a very cold season.

(as a disclaimer, Kepler's law of elliptic orbits doesn't exist in Elefas!)
